Rose Dresser Weds William J. Edgar

The marriage took place Thursday, October 27th at 2 p.m. of Rose Marjorie, eldest daughter of Mr. and Mrs. V.J. Dresser of Carbon, and Mr. Wm. J. Edgar, son of Mr. and Mrs. Wilfred J. Edgar of Innisfail. The ceremony was performed by Dr. John H. Garden of Calgary at the home of the bride's parents in the presence of about 50 relatives and friends.

The bride, given in marriage by her father, wore a floor-length model of ivory chiffon velvet, with full-length veil and velvet and pearl coronet. She carried a bouquet of red roses. Her only attendant was her sister, Miss Phyllis Dresser, dressed in turquoise chiffon velvet with matching coronet and carrying a bouquet of pink roses.

Mr. Robert Edgar attended his brother as best man and Wayne Dresser, brother of the bride, ushered the guests to their places.

The bride and groom later left by motor on a honeymoon trip to Victoria, B.C. and other coastal points. On their return they will take up residence at Innisfail.

"LITTLE CANADA" IS TOWN'S TRIBUTE

To perpetuate the link made during the war between Bethill, Sussex and Canadian troops billeted there, Bethill Council have given

CODE BROTHERS SELL MACHINERY AGENCY

Findlay and Duncan Code, agents for the Cockshutt Plow Co. in Carbon for the past two years, have sold their business to Mr. Walter Schacher of Hilda, Alberta. Mr. Schacher took over control of the business on the first of November and will continue to operate from the same premises. The Code brothers will still operate their general trucking business, as well as their farm seven miles northwest of town.

KNEEHILL M.D. DECLARED BOVINE T.B. RESTRICTED AREA

Notice has been received that Kneehill M.D. No. 48 has been declared a restricted area for the control of bovine tuberculosis and testing has commenced. Dr. Geo. S. Peppin is doing the work for the Health and Animals branch.

Farmers, truckers and dealers are now advised that only T.B. tested animals can be brought into the area.

Parties purchasing cattle to be brought into this district should be certain that the animals have a Health of Animals certificate. If such a certificate is not available, arrangements must be made for obtaining such a certificate before the animals are brought into the district.

Canadian names to roads on a housing estate in the towns north-east of Carbon, names chosen as Carbon Way, St. Lawrence Road, Edmonton Road and Calgary Road.

Weather Recorder Found in Pasture By Dick Garrett

While crossing pasture land on his farm northeast of Carbon, on Monday of last week Dick Garrett discovered a small cardboard box with a balloon attached. On inspection the box proved to be a small radio transmitter connected to a weather barometer and consisted of an aerial, two tubes and a dry battery. The instrument was called a "Radiosonde" and had been made by the Bendix Corporation in the United States for the U.S. government weather bureau and was used for recording changes in temperature at high altitudes. The box itself was about a foot square and four inches deep, and was insulated with a brownish felt.

Instructions were enclosed in a panel on the box, but due to long exposure to the weather could only be partly deciphered. However, Mr. Garrett was able to glean the information that the balloon had been released on August 9, 1948, and that on reaching a height of 12 miles would burst, letting the instrument return to earth by means of an attached parachute. A fastening holding the parachute was broken on the box and the parachute could not be found. The balloon would be from six to eight feet in diameter when inflated.

The instructions also requested that the instrument be returned to its point of release. This name was included in the instructions, but was indistinguishable. Mr. Garrett has written to the government weather bureau at Spokane, Wash., enclosing numbers on the box which were legible and is hoping for an early reply with information as to the point of release.

MRS. CELINA CONLON BURIED WEDNESDAY, OCTOBER 2

Funeral services for Mrs. Celina Conlon, who passed away Sunday evening, October 31, were held Wednesday from St. Gabriel's Catholic Church, Carbon. Requiem high mass was sung by Rev. Father J.Q. Kilian.

The late Mrs. Conlon was born in Quebec 93 years ago. She had resided in Alberta for the past 50 years, making her home in Carbon for the last 47 years. There are no known survivors.

Interment was made in the Carbon cemetery and pallbearers were G. Appleyard, J. Appleyard, G. Treleaver, J. O'Rourke and J. O'Rourke. Winters Funeral Home of Drumheller was in charge of arrangements.

LONDON BRIDGE IS OPENED

A bridge, over which thousands of Londoners have walked, was opened recently at Kafue, Northern Rhodesia. It is the emergency bridge which linked the south bank of London's Thames River, near County Hall, to Victoria Embankment. The bridge is the gift of the Beit Trustees on whose behalf it was handed over to the government of Northern Rhodesia by Sir Alfred Beit.

PRICE OF OIL

There is hope for a reduction in the price of oil in Alberta in the next two years. This forecast is made by Frank Prendergast, assistant to the President of the Imperial Oil Company, in an address delivered at Denver, Colorado. He stated that price reductions made last year into the prairie consumers' annual bill for oil cut fuel prices by some \$9 million. He did not say, however, how much the increase in oil prices last month added to the bill.

We have yet to hear from the staunch advocates of the law of supply and demand as to their opinion on the price of oil in Western Canada. Alberta has over a thousand oil wells in production and can flood the country with oil but the price remains stable—The Budget.

THE BATTLE OF DEMOCRACY

"IT'S MY BELIEF THAT the battle for democracy in this country will be won or lost in our small towns. As I see it, at no time in our history has there been so great a challenge to our freedom as today, and I think this freedom can best be preserved by a hard-fighting democracy functioning effectively at the local level."—Billy Rose.

NATIONAL CHEESE WEEK

Although one of the most versatile of foods, Canadians know little about cheese, and on the average use little. Cheese is produced in this country in many different sizes, shapes, colors and combinations. It is one of our chief food exports, yet the average Canadian uses only about four pounds a year as compared with an average of nearly ten pounds in other lands. In Britain, Canadian cheese has been a favorite for almost a century and is highly regarded there. There is quite a demand for our cheese in the U.S.A., and this business is growing. In Canada, the source of this high quality product, consumption is just about as low as anywhere in the world.

This week, November 7th to 12th, has been declared National Cheese Week. During this time, Canadians will hear more about this nutritious food, but it is that not only will more Canadians sample our cheese and prepare more cheese dishes, but that this wholesome product will be offered as a Canadian food to our visitors.

John Wood Heads Carbon F.U.A.

The Carbon F.U.A. Local No. 1054 meeting at the Legion Hall Thursday evening, November 1, was well attended by district farmers, and a new slate of officers was elected to take over for the ensuing year. John Wood was named to the office of president and Dick Garrett was returned as vice-president. Hugh Baug was again elected secretary-treasurer of the organization. Numerous important subjects were discussed during the business session and lunch brought the meeting to a close.

MARGARINE

Right Honourable J.G. Gardiner stated in the House of Commons recently:

"I was just telling someone across the floor tonight that I had something to do with the Great Dane dog that was fond of butter. His mistress gave him bread with butter spread thickly on it; but being Scotch, she came to the conclusion that there was no use spending so much money, so she went and got a pound of oleomargarine and spread the bread with it. The dog sniffed at it, put his tail between his legs and went and lay down in a corner as far away as he could get from it. In other words, if individuals do not know the difference between butter and oleomargarine, dogs do."

SASKATCHEWAN

The province of Saskatchewan has an acreage of land of 584 million acres. This is about one half the occupied farm land in the prairie provinces, and about one third in the Dominion. In 1946 when the last prairie census was taken the improved area amounted to 35.6 million acres or about forty per cent of the improved area in Canada.

Saskatchewan has a total of 110,000 farms averaging 473 acres each, with 330 acres of that in crop land. Numerically the half section farm is the common size in the province.

A PORTABLE ATOMIC PLANT

Tests are starting in Britain on a portable atomic plant. It has been produced by British scientists after three years of experiments, and is designed for use in hospitals, medical centres and health research units. The first of its kind in the world, it has been described as a miniature atomic pile. The equipment is easily transported since it weighs barely two cwt. It produces isotopes by using uranium in a form of pure oxide. There is no danger of radiation since its range is limited and nullified by adequate safeguards.

F.A. TEAM TO TOUR CANADA NEXT YEAR

The Football Association is to send a team to play ten matches in Canada next year. They will leave for Canada soon after the end of the season in England, around the end of April, 1950, and will probably return somewhere about the beginning of July. The team's itinerary and final details will be discussed when the Director of the Canadian Football Association visits England some time in November.

TREES FOR FARMS

Every year thousands of trees are distributed to farmers in the prairie provinces by the Dominion Forest Nursery Station at Indian Head, Saskatchewan. These trees are supplied free of charge providing the land on which they are planted has been summer-fallowed the preceding year.

Trees which are available for only the cost of the freight are: caragana, ash, elm, Manitoba maple, poplar and willow. There is a nominal charge for each of the following evergreens: white spruce, Colorado spruce and Scots pine.

As the supply of all of these trees is somewhat limited, farmers who wish trees next spring are advised to make application this fall. Write to the Dominion Forest Nursery Station, Indian Head, Saskatchewan, for further information.

—Has your subscription expired? Check the label on your paper and if it arrears an early settlement will be appreciated. Payment may be made at the Chronicle office in Carbon.

Mrs. Mary Shaw Dies November 2

Mrs. Alexander (Mary) Shaw, 74, died Wednesday, November 2, at her home in Carbon.

Mrs. Shaw was born in Ayre, Ayrshire, Scotland, and came to Calgary in 1904. She moved to Carbon later in the same year and had lived here ever since.

She is survived by her husband, Alexander, and one brother, William Douglas, both of Carbon.

Funeral services were held Saturday, November 5, at 3:30 p.m. in Park Memorial Chapel, Calgary, with Rev. C.A. Warren officiating. Pallbearers were W.B. Elliott, E.L. Halstead, W. Downes, James Gordon, W.J. Gordon and W. Vanover. Interment was made in the Union cemetery with McNicoll and Hollway in charge of arrangements.

Lithium is the lightest metal known. A cubic foot of it would weigh only 82 pounds.

New School Buildings

THERE ARE MANY ELEMENTS which go into the making of a successful educational system. Good teachers are, of course, essential, but buildings and class room equipment also play an important part for both the pupils and the teachers. In the building of schools, as in many other matters, times have changed considerably in the past twenty-five years and the design of a modern school is quite different from the school buildings constructed early in the present century. Until a short time ago there were relatively few new school buildings in Canada, and many of the old ones, which are still in use, are far below present standards of school architecture. In some of the larger cities, due to overcrowded conditions temporary buildings, never intended for schools, have been brought into use, and some have continued to house classes in spite of the fact that they are inadequate.

Did Not Build New Schools

There are several reasons why the number of modern school buildings has not kept up with the need for them. During the depression of the 1930's money was not available for building new schools, and at the end of the war there was an accumulated need for a great many new school buildings. Since that time, however, there has been what is termed a boom in the construction of new schools, and according to "School Progress," a business magazine for Canadian schools, this boom has not yet reached its peak, but is expected to continue for another ten years.

New Programme Benefits Many

In Saskatchewan a total of \$7,500,000 has been spent since the end of the war, and the department of education has proposed that another five million dollars be spent on school buildings in the next three or four years. In addition, the larger cities in that province have plans for expenditures of over one million dollars for new schools in the immediate future. Alberta cities are planning to devote over twelve million dollars to the building of schools, and Manitoba has a building programme which will involve several million dollars. Ontario has already spent \$15,000,000 on school buildings since the war, and is expected to spend much again to bring accommodation in the schools there up to the desired standards. Large expenditures for this purpose are also being made in Quebec, the Maritimes and British Columbia. It is encouraging to know that the provinces are taking this interest in improving elementary and secondary school facilities here. Many schools are now used for adult education classes and for community activities after regular school hours, so not only the pupils, but the community at large is benefitting from the present extensive programme for the construction of new and modern school buildings.

Girls Have Rings, Seek Husbands

LONDON.—Three pretty Mormon girls from Cape Town have arrived here, on route to Salt Lake City, Utah, to find husbands. They even brought rings set with blue and white diamonds. Telephone operator, Joan Baker, 22, said, "I want a clean-living man." Typist, Anita Kohl, 21, said, "I'm looking for a devoted man." Clerk, Joyce Kell, 19, Anita's sister, said, "I must have a man who does not drink." The girls brought their own rings because "diamonds are so much cheaper back home."

Sale Of Oil Land Hits Peak

EDMONTON.—The Alberta provincial treasury had another \$2,866,968 and statisticians had a record for their books as a result of sale by the Alberta Government of petroleum and natural gas rights on eight quarter sections of land in the Redwater and Leduc oil fields.

Big feature of the sale was the \$918,682.67 paid by Tanner and Co. Ltd. of Calgary for a single quarter section, Parcel 64 in the northwest section of the Redwater field. The land is close to Imperial Government No. 1, a big producing well.

The price was the highest ever paid for a quarter section of land in Alberta, eclipsing the \$602,800 paid by British American Oil Co. Ltd. at the previous oil rights sale, Aug. 25.

A syndicate composed of E. H. and C. B. Tanner of Calgary and two associates made the record bid. Only Canadian capital is behind the project. The Tanner brothers, who operate a nationally-known investment business in Calgary, said the land will be drilled and managed by a major oil company with full ownership remaining with the syndicate.

The Calgary firm also paid \$677,267.17 for Parcel 65, a quarter section in the northwest corner of the Redwater field and near producing wells.

FUNNY And OTHERWISE

Visitor: "Has your baby learned to talk yet?" Dad: "Yes, indeed. We're teaching him to shut up now."

Mother: (to small son wandering around the room)—What are you looking for? Son—Oh, nothing! Mother—You'll find it in the box where the cookies were.

Grandma was telling the family about her day in Cincinnati. "I met such a pleasant young man in the train," she said. "He offered to give me the winner of the Kentucky Derby."

"And did he?" she asked eagerly. "Of course not, my dear," she replied. "I had to tell him that the chickens take up all the garden and we've no room for a horse."

"What do you think of a man who constantly deceives his wife?" "I think he's a wonder," replied the Newcomer. "My husband is an efficiency expert in a large factory."

Friend: "What does an efficiency expert do?" Newcomer: "Well, if we women did it, they'd call it nagging."

"There's only one way to get rid of your surplus fat. Exercise, and plenty of it!" "Nonsense. How do you account for my wife's double chin?"

Little Woman (preening herself before a mirror in her exclusive hat shop): Don't you think this is duck of a hat? Hubby (with a caution born of long experience, peering at the price tag): Yes, dear, but please, hurry, can't you find a duck with a smaller bill?

A good golfer "puts" a ball; a golfer dub "puts" a ball. Put means to place a ball where you want it; putt means a vain attempt to do the same. Do you put or do you putt?

KITSCTOY MAN CHOSEN AS COWBOY CHAMP

CALGARY.—W. C. (Bill) McLean of Kitscoty, Alta., has been chosen by the Cowboy's Protective association as the 1939 champion all-around cowboy in western Canada.

The association announced that McLean scored 1,747 points, after competing in rodeos in Saskatchewan, British Columbia and Alberta during the year. In second place was Lawson Pace of Los Angeles with 1,660 points. Don Dewar of Hester, Sask., was fourth with 1,302.

The saddle bronc-riding contest was won by Alan Brown of Viking, Alta., with the steer-decorating title going to Everett Vail, of Ponoka, Alta. Floyd Peters of Browning, Mont., won the calf-roping championship. Bob Duce of Cardston, Alta., the bareback bronc-riding and Harry Thompson of Black Diamond, Alta., pulled down the steer-riding event.

TOYS FOR OVERSEAS OTTAWA.—Canadian soldiers are playing Santa Claus to underprivileged children in the United Kingdom again this year. More than 60 cases of toys manufactured by permanent force army personnel in off-duty hours will be sent overseas shortly.

OTTAWA.—Yellowknife, a boom town a few years ago, is having financial difficulties. This was disclosed in a report at a meeting of the Northwest Territories Council.

Main point which emerged from the report was that the town has not progressed and expanded as rapidly as had been expected. The town was in poor financial position despite "very large" capital expenditures by the Federal Government.

However, "the results of high-rising costs and fixed incomes from wages are making it difficult to raise revenue to maintain and operate the municipal services."

Treatment Of Hog Mange And Lice

Writing in "Better Farming Methods," Martin H. Muma, Associate Entomologist, University of Nebraska, says:

"Two distinct kinds of mange may be present in hogs. Common or sarcoptic mange is caused by the sarcoptic mange mite, a whitish, round-bodied parasite about one-sixteenth of an inch long. Most of its life is spent in tunnels and burrows beneath the surface skin of the animals, where eggs which hatch in three to 10 days are laid. The young mites complete their cycle by maturing in 10 to 12 days. Although very minute, the mites may be seen with the naked eye or a magnifying glass when infested skin scrapings are placed against a dark background. They pump granular lesions around the eyes, ears and nose and occasionally on the under parts of the body usually mark the presence of the parasites. The infested skin areas lose their hair through rubbing and become bare and scurfy and may later become covered with thick, wrinkled hide, giving rise to the term 'elephant hide' frequently used to describe the condition.

"Less common is demodectic mange caused by microscopic mites.

Cattle Operate New Insecticide Duster

The weight of cattle themselves produces the driving force of a new insecticide duster being used by Arizona ranchers.

The duster takes place in a narrow chute through which the animals are driven. Insecticide dust from nozzles in the side walls covers them completely. The necessary air blast to carry dust is created by a bellows-like arrangement over which animals must walk.

This is described as a depressible float located over a small pit and mounted on spring coils. The weight of an animal depresses the float, compresses the air in the pit and drives it out to the dust nozzles.

By an ingenious arrangement, proper amounts of insecticide dust is expected to the air.

Eighty to 90 per cent. of retarded readers have a seeing problem.

STAMP CORNER :

By JAMES MONTAGNES

—Stamp course Alden C. Johnson, Toronto.

New issues recently received include (top, left to right) for 1934 anniversary of the Universal Postal Union, for the day of the horse from the Saar, (lower, left to right) for Emperor Johann Strauss the first, for the centenary of the recent Holy Days, from Port-au-Prince, Time showing native girl.

Design Of New Canadian Stamps

Stamps come in all sizes and shapes. Some are square, others oblong, some diamond-shaped and some triangular, some are large and others are very small. And while we in Canada are used to seeing stamps of two main sizes, there are a variety of sizes in stamps, all issued for very good reasons.

Probably the most famous of the old-shaped stamps are the first issues of the Cape of Good Hope. In 1853 this colony at the tip of South Africa began issuing triangular-shaped stamps to make it easier for postal employees to handle.

Between mail arriving from Great Britain and that mailed within the colony, the triangular stamp had served to draw attention to the colony in Great Britain and to South Africa. So popular have these stamps become that in 1926 the Union of South Africa issued replicas of these early stamps.

Canada has issued few old-shaped stamps. There was a small stamp issued in 1852, a half-cent stamp with portrait of Queen Victoria. About two-thirds the size of regular stamps, but in 1859 there were two Canadian old-shaped stamps which are among the rarities in any collection today.

The postmaster at the small Nova Scotia village of Port Hood was short of one-cent and two-cent stamps of the current stamps of 1899. A friend suggested he cut the three-

that infest the hair follicles and all glands of the skin, where they usually spend their life cycle.

"In either of the above conditions is suspected infection should be prompt as infested hogs rapidly lose condition and gains are slow and costly. Control of the parasite has usually been through dipping or spraying with crude oil thinned with kerosene, or with a mixture of lime-sulphur heated to 85 to 100 degrees.

"Tests conducted lately in Nebraska have demonstrated a new and simple single treatment method for control of sarcoptic mange in hogs. It consists of a single spraying with one-quarter of one per cent. of the gamma isomer of benzene hexachloride. It is necessary that the hogs be completely covered with the spray, but if the job is done in a small pen with a power sprayer the hogs will climb over each other and then wet their under parts. Care should be taken to spray inside the ears as well.

"Wettable powders of benzene hexachloride, ranging from one to five per cent. of the gamma isomer of benzene hexachloride, have been used and the percentage must be known before the spray is mixed. Following are the right amounts of wettable powders to use with five gallons of water:

54 lb. of 12% gamma powder
1.00 " " 10% " "
2.00 " " 5% " "

"Dilutions stronger than one-quarter of one per cent. of the gamma isomer should not be used. Benzene hexachloride has a strong, pungent, musty odor and may cause a burning of the eyes, nose and mucous tissues while the spray is being applied. As this soon disappears and no after effects have been noted. Because there is no odor, the pungent odor of the material may cling to the hog carcasses if sprayed shortly before slaughter it is better practice to treat the breeding stock and younger feeder pigs rather than hogs soon destined for market.

"While the same material has not yet been fully tested for control of demodectic mange in hogs, it has given good clearance in case of demodectic mange in dogs and it is expected that similar success will be attained in affected hogs."

The same treatment will completely control lice.

Velvet And Tweed, Muff And Buckskin

Rich brown velvet is used for collar and cuffs of this peppy brown tweed dress. Gold earstings and nutria trim make accessories. A three-dimensional collar side height to the box jacket of this New York Tweed coat. Skirt has trouser darts and is worn with buckskin blouse. —Central Press Canadian.

Decoratively SPEAKING

(By Francis James)

The trouble with expensive paintings is—they're expensive! These days the average family isn't shopping for original Rembrandts. Or, for that matter, for any kind of original.

That is why we felt that a few ideas on economical ways to make one's home attractive would not come amiss in this column. We've seen all these methods used in homes that we have visited.

One young couple we know have used dishes very effectively in the living room of their small apartment. Their walls are papered in a plain, light turquoise. Just as though they were hanging paintings, they have taken squares, oblongs and circles of light turquoise paper, glued them to their cardboard to give them a bit of backbone and hung them in groups on the walls. On each of these they have hung dishes—round plates, square plates, square cake dishes, etc. Chosen carefully to blend with the color and mood of the room. The effect is very lovely.

One young woman has had her own flower prints for the bedroom in her house. These replace, very nicely, the flower paintings you can buy—but at fabulous prices. It was very simply done. She bought four cheap chintz in a pattern to blend with her bedroom walls. She cut patterns out of this—each one slightly different from the last to save the overall effect from monotony. She took a very narrow hem in the edges of the patterns to keep the chintz from fraying. She then starched them very stiffly, ironed them, glued them to paper backgrounds and hanged them. She had four of them in her bedroom—and they cost, she told us, about ten dollars. To buy anything half so attractive, she would probably have paid five times that amount.

Still another couple had found the way they picked up for 98 cents to decorate the walls of their small boy's room. The story, of course, was told in two lines (large print):

Some Eskimos Acquire Riches By Trading

TORONTO.—The Canadian Eskimo, once regarded as a soft touch who would trade a wife for a handful of fishbones, has turned trader.

A. H. Gibson, itinerant magazine man for the Northwest Territories on a visit here, said some Eskimos have started the trading business and have become comparatively rich men.

Gibson said he knew of one Eskimo called "Big Shot" who died recently and left an estate valued at \$20,000. Many others were known to have as much as \$12,000 in government bonds and baby bonus checks.

This growing wealth has set the government on a program to educate the Eskimo in the use of wells. Under the former system, when a man died his neighbors grabbed everything if the family happened to be out, sparing seeds or otherwise helping.

In the case of Big Shot, a public administrator took over after his death to make sure there was a fair division of his bonds, tents, boats, dogs, outboard motors and radio.

Gibson said the Eskimos watched carefully while the inventory was being made and first thought the government's idea of settling an estate was to grab everything.

The Northwest Territories administration is now sending out a team to the Eskimo for some of his age-old customs, like leaving the feeble to die, approaching the program from a different direction. Airborne health clinics and X-ray "round-ups" span the houses of Arctic villages and aerial ambulances bring sick Eskimos to the mainland.

Of the estimated 5,000 Eskimos in Canada, only 23 are living outside the Arctic.

The white man's gadget most popular among them is the radio. Many carry battery sets on fishing and hunting expeditions, Gibson said.

One far-north visitor, Gibson said, was a hunter who had a radio hanging in a hut in which three radios were stored.

"Everybody in the family likes different programs," the head of the household explained. "This way, everybody can listen to what he likes."

STREET NAMES FOR BABY CHARLES

CHICAGO.—Princess Elizabeth named a tree-lined street "Princess Charles" for her 11-month-old son.

The second in the second line of succession to the British throne, the prince of Wales, a school and a street named for him.

It takes but the fraction of a second for human eyes to see an object.

On The Side -By-

E. V. Durling

What is the extent of your faith in the photo-finish camera used at racetracks? Are you sure it is never wrong? The fact is the photo-finish camera has been somewhat shaky in view of some recent events. In one light race was shown, the head of the horse had been switched. Number three had a dark head; number four had a white spot on its head. The picture showed number three with the white spot on its head, number four with the dark head. Another time the picture came out with the two horses in the close finish having only one head. An embarrassing moment for the judges, what? Another time in a three-horse finish, the picture came out with the horse in the middle missing a head! Ask the nearest photography expert to try to explain this strange situation.

WEEPING

Why do women weep at the weddings of other women? Angela Best says this weeping is inspired by "empathy." The dictionary defines empathy as "the imaginative projection of one's own consciousness into another being." In brief, says Angela, some wedding guests imagine themselves to be in the bride's place. So they become nervous and emotional and give way to tears. I rise to ask, if that is the case why don't the brides cry? Brides never cry. They don't even become nervous. They always have the situation well in hand during the ceremony and emerge from the church cool, calm and collected with an expression on their faces that seems to say: "Well, I got my man. I'm not losing his grip on their own matrimonial experiences cry because they are sorry for the bride."

HORSES AND WOMEN

Hardly a day passes I do not see some newspaper or magazine article by a female writer in which "unromantic husbands" are complained of. In addition, I hear many matrons voice a similar complaint. I am growing weary of the constant repetition of these "husbands to kiss." The fact is making it hard to bear down a little more on inspiration they might have a little romance in their lives. Hardly a man is a new alive who can't put into a romantic mood by a clever woman. I also rise to ask at this time: "What is the woman's role in 'unromantic wives'?" Unromantic wives are all wrapped up in thoughts about clothes, bridge parties, interior decoration, etc. You know, the type described in the play, "Craig's Wife." The kind of wife who out their husbands' heads to kiss. The fact is, generally speaking, men are more romantic than women. That is, more than most women who claim to be. Many women who claim to be romantic married lives merely want assurance. Interested chiefly in economic life, they want to make sure they are not losing their grip on their provider.

ASKING

Queries from clients. Q. What do you think of the so-called "Dutch Treat" A. It's a good idea. Especially when you're out to a bar during a storm. Use the Dutch Treat. The Dutch Treat is a good idea. Especially when you're out to a bar during a storm. Use the Dutch Treat. The Dutch Treat is a good idea. Especially when you're out to a bar during a storm. Use the Dutch Treat.

It is dangerous to eat duck eggs? I never thought of it was. However, recently in the British House of Commons the minister of health was questioned as to a memorandum submitted to him by a doctor who had reported the danger of food poisoning. So far I have never consumed a duck egg. Probably a mistake that if you ever eat a duck egg you had better seek the advice of an expert on how to prepare said eggs. 2854

Devoting Full Time To Farming

Dr. L. Newman, former Dominion Cerealist, now retired, is devoting his full time to his farm on the Rideau river, about 40 miles from Ottawa. Dr. Newman thinks that farmers should do a little more experimenting to enable them to find out things to their own benefit in their farm operations. On Dr. Newman's 100 acres 25 are in oats, 25 in hay, 15 in silage corn and the remaining fields in pasture. The agricultural scientist said the main idea of the "Elmhurst Farm" is to find out how many registered Holsteins it can maintain in good condition by good management, at the same time keeping the fertility of the soil built up to a high level.

Pheasants At Home In Canada

The Mongolian Ringneck pheasant, a native of the Orient, has made himself at home in Canada. Ringnecks have been liberated in Montreal, Drummondville and other Quebec districts with varying degrees of success and government interest in the project has developed. In these districts the birds are breeding naturally and modern incubation and brooding equipment has been acquired by the St. Francis Anglers and Hunters Assoc. of Drummondville. At top left is Brother Phileas of the Brothers of Charity in Drummondville holding one of the Ringnecks and at right young pheasants grow well and the rows of sandovers at Oka. Centre above is a winter scene at the Oka Pheasant Hatchery, directly above is another winter view of the poultry houses at Oka.

PLANE STOWAWAY—Joe Corbett, 14, of Elmville, Ont., was discovered in the unheated tail compartment of a T.C.A. aircraft, when the plane landed in La Guardia airport after its Malton-New York run. Officials placed him on the next plane back to Toronto and after a brief interview by immigration officials at Malton he was allowed to return home.—S.N.S. photo.

HEADS YOUNG LIBERALS—William J. Trebilcock of Winnipeg, who is the new president of the Young Liberals' association. He succeeds Charles A. Dahacereau of Montreal.

ADDRESSES C. OF C.—Herman W. Steinkraus, president of the U.S. Chamber of Commerce, told Canadian Chamber of Commerce, in an address at Montreal, that business needs friends and is the strength of nations. In the past, he said, businessmen have allowed others to come in and malign them without answering back.—S.N.S. photo.

"TAME" CRANE—The cranes at the lake near Napaodon, N.H., are so friendly that they are often called "tame" cranes. This one, shown with his wings held outstretched by Verna E. Plinn, was found ill or wounded in some fashion and was quite content to allow himself to be taken care of until he recovered. Later he was taken back to the lake and released.

LOST \$96 AT POKER GAME CHARGE HE STOLE \$21 BACK—Accused of \$21 cap-gun robbery in a St. Catharines club, W. H. Brockelbank, 22, of Grimsby, telephones home from police station. Chief Constable Dun-

can Brown holds cap pistol. At left officer takes report from three victims. Brockelbank said he lost \$96 in a poker game at the club a week before. (S.N.S. Photo)

RESCUES DROWNING BOY—Crawling down the rough sides of a 12-foot well, Jessie Crowhurst, 15, of Hallsdale, rescued Freddie Watson, 14, from drowning in deep water at the bottom.—S.N.S. photo.

The Adventures of Captain Morgan

IN THE PIRATE SEAS

7 DAYS ABOUT FOR THREE WEEKS IN AN OPEN BOAT, MORGAN AND JACKMAN HAVE ENDURED TORTURE, HAZARDOUSNESS OF THE BUCCANERS. THEY HOPE TO BE ADMITTED WITHIN THE SHOTGUN HOOD OF THE COAST.

YOU'RE BRAVE LAD! WELCOME TO TORTUGA! SIT AND DRINK WITH US!

FINE RECUITEE THEY'LL MAKE! ASKED ONLY WITH A SALT-CRUSTED MULKET AND A SWEET EAT THEM!

SIT DOWN, "MIGHTY" THEY'VE WEARY—EAT THEM!

(WITH THIS ROLE AS A QUACK) TESTIFY! I'LL SHOW YOU HOW TO FIGHT, OR MY NAME IS MORGAN!

HA! I'LL SOON STOP YOUR GROWING, MY YOUNG COCK!

HEY! THE STRANGER TEN TO ONE HE'LL BEING HONOUR TO THE BROTHERHOOD OF THE COAST!

YOU WIN, MORGAN! YOU SEE A FIGHTER!

I'LL BE PLEASANT TO PROMISE YOU WHATEVER YOU ARE INITIATED AS A BROTHER OF THE COAST!

Weekly Paper Fills Vital Role

VANCOUVER—“Weekly newspapers will be as much a part of Canada's tomorrow as the sustained folk, courage, leadership and means of publishers are willing to make them.”

William D. Welsh, public relations director for Crown-Zellerbach Corporation, San Francisco, placed this declaration before B.C. Division of the Canadian Weekly Newspaper Association at the association's annual banquet in Hotel Vancouver.

He emphasized the paper's place in Canada's economy, their more important place in recording public happenings and guiding public opinion.

Newspapers, Mr. Welsh declared, are “super-salesmen selling the skills, experience and employment of a lot of people.”

He declared a great sales responsibility rests upon papers to train young men to the viewpoint that a newspaper is not for special groups, but must be a “page mirror” — reflecting the full passing human parade.

Young newspaper men must be taught, he declared, “that if the dark day should ever come when freedom's columns are shackled and enslaved, then from that day forward men will no longer be able to talk freely in open forum or chat over the fence with their neighbors.”

Weeklies must play their part, Mr. Welsh asserted.

KITCHEN MEDITATIONS TWILIGHT HOUR

By JANE DALE

Slowly it comes—the twilight hour. Silently creeping o'er the way. Gently it soothes my restless heart And bids me for a moment stay.

Hushed there comes as shadows fall A calmness to my mind and heart: A surcease from the day's dull care; An hour for rest—thus set apart.

In the soft twilight and sweet peace, As then without the world grows dim, I hear once more the words, “Be still!” And trust anew my cares to Him.

Fashions

By ANNE ADAMS

PATTERN 4682 (225 10-14)

Teen-Edge Sewing

Two main pattern parts for dress! FOUR accessories to wear with it. HEAPS of new clothes for so little time and effort. Sew it in a jiffy for classes and dates!

Pattern 4682 in Teenage sizes 10, 12, 14, 16. Size 12 takes 3 yds. 24-in. 1 1/2 yds. 24-in. nap contrast.

This pattern, easy to use, simple to sew, is tested for fit. Has complete illustrated instructions.

Send twenty-five cents (25c) in coin (stamps cannot be accepted) for this pattern. Write plainly, Name, Address and Style Number and send orders to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 60 Front Street W., Toronto.

FARM INCOME

Alberta's total cash income from farm products in the first six months of 1949 was \$299,500,000. 2551

—SAY THAT AGAIN!

—IT'S A CAPTAIN'S UNIFORM!

PRISCILLA'S POP—Man Against The World

OH, WHAT A DAY I'VE GOT! THE CHILDREN WOULD LIKE TO GO TO THE PLAY.

—NO, THINK THEY'D PREFER THE PLAY.

—THERE YOU GO AGAIN, HAZEL! ALWAYS THINKING YOU KNOW BETTER THAN I DO.

Women's Influence Still Felt In Commons

OTTAWA—The little woman may not have a representative in the Commons, but her influence is still felt in the chamber, Irvine Stiller (Lib.-Maple Creek) said.

“Women's influence is present in the House, and I know it is here with me because I have not said anything since I have been a member of the House of Commons that my wife has not told me to say,” he confessed.

A large number of members have expressed regret that no women members were elected in the last general election.

“But,” he added, “I have not heard very many of the members say that they are willing to resign to make room for a woman, nor have I heard myself say so.”

However, the influence of women was felt despite lack of representation and largely was responsible for the passage of family allowances.

New Canadian Altitude Mark Made By R.C.A.F.

MONTREAL—A new altitude mark in Canada was believed recorded recently in the skies over nearby St. Hubert, Que., by P.O. Malcolm G. Graham, a pilot with the R.C.A.F.'s 410 (Cougars) fighter squadron, who took his British jet Vampire aircraft to 47,000 feet.

The 25-year-old native of Dutton, Ont., said that “Montreal looked like a small-sized ash-tray from that height. He said visibility was so good that he could see Lake Ontario, approximately 200 miles away.”

The present world altitude record is listed as 59,492, recently chalked up in England by the latest version of the British jet fighter plane—the Ghost Vampire. P.O. Graham's plane was a Goblin Vampire Mark 88, credited with a 5,700-pound static thrust as compared with the Ghost which has a 5,000-pound thrust.

Group Capt. Jean Archambault, senior air force officer for Montreal area, said the 47,000-foot mark was a new altitude record for aircraft in Canada.

BIGGEST RAIL UNIT

1,500 Feet Straight Down

Ocean Diver Reports World Of Darkness, Carnivores, Luminescent Fish

By TAMARA ANDREWS
(Central Press Canadian Correspondent)

SANTA CRUZ, Cal.—What mysteries there the ocean hold beyond 2,000 feet, which was the deepest man had descended? This was the question Otto Barton, marine explorer in his own right and a one-time diving partner of Dr. William Beebe, was asked to answer when he made his daring 4,500-foot record-breaking dive in a steel "benthoscope" to the depths of the Santa Cruz basin.

He knew that at the depths he planned to achieve, the pressure would be murderous, the water cold, and darkness complete. Sun rays do not penetrate much beyond a thousand feet, so the bottom of the sea at 8,000 feet or so is pitch-dark. Whatever forms of life are able to exist at such depths, where pressure is 2,664 pounds a square inch, are nightmarish fish with giant luminous feelers, or fish with lanterns in their jaws, or putrefactions resembling electric bulbs—their own bioluminescence.

The dangers of such a trip cannot be underestimated. The cable may break, sending the heavy steel ball to its doom on the bottom. The diving rig has yet been designed to withstand the pressure at such depths; no power of man could come to Barton's rescue should the benthoscope suffer such a mishap. A sudden storm may blow him back, leaving the quarts windows against some submarine rocks. The slightest leak at the terrible pressure of those depths would cause the ball to be crushed like an egg-shell. The twisting of the steel cable, almost inevitable in such lengths at 1,500 to 7,000 feet, which was the length of Barton's diving cable, might cause the cable to break. Any delay in hoisting might end the oxygen supply and prove fatal.

With all these dangers, Barton was eager to make the dive. The ocean, he says, is a new and vast frontier, with tremendous resources of gold, petroleum, and riches in new kinds of food. It is little wonder that Barton and the Allan Hancock Foundation, vitally interested in marine research, willingly advanced \$15,000 for the benthoscope's construction.

In preparation for meeting the cold at the depths where he was going, Barton simply took along a pair of goggles. The light for viewing the strange marine life he was to encounter, and for making movies, was to be furnished by a huge projector, with 720-watt bulbs mounted on either side of the 54-inch fused quartz window.

The dive was to take place eventually at a point northwest of the Santa Cruz basin, situated in the deepest water around the channel. But as it rained in exploration, the unexpected happened. At 1,500 feet the light flickered and went out. Barton found himself in total darkness. "I do not mind confusion,"

Otto Barton checks hatch of his giant steel diving ball, the benthoscope.

ing," he says, chucking his brow, "it was scared."

Barton had good reason to be scared. The sea is a treacherous frontier to explore. In preliminary dives when the steel benthoscope was being lowered unannounced to see if the 7,000-pound all steel ball could withstand the maximum buckling depth of 10,000 feet, it met with an accident.

The walls held, but the huge hose which were to take it over the rocky or uneven bottom, snapped right off, and even the bolts were sheared off. When the ball, which lowered the ball rolled, tons of water put a strain against the large surface of the wheels.

"The bolts just did not hold," Barton says. "It was decided to build a wooden crane around the ball instead of wheels, for descent to unlevel terrain or rocks, and of course no one could guarantee that such a crane would not become hopelessly lodged in some crevice."

"Once you are down there," Barton says, "you forget about worrying." It seems that sitting in complete darkness, in a violently jerking steel sphere, bruised and seasick, has its compensations. "It was like sitting and watching some fantastic movie."

Up and down in front of the window would glide shapes outlined in specks of blue, yellow, and white like strings of jewels. Some were reminiscent of jellyfish. Others, whose little luminescence would approach the glass so closely it might seem to blow up into a cloud of light.

"Remembering my earlier dive," Barton says, "I was able to identify tentatively the strange lights. The explosions near the glass were fiery shrimp of the depths which in exact reverse from the conventional squid."

An endless row of dots darting past the window, "something like an electric Morse code," he believes to have been school of tiny fish, or sea worms. The round and oval shapes suspended within his range of vision were the illuminated glow of gulper eels. "Even their teeth are luminous," he says. "The very jaws of hell."

All the while he observed a struggle for existence, and a chase of one form of marine life after another because by necessity all creatures of the depths are violently carnivorous. They are far from the bottom and farther from the top, so the only thing they can do is eat or be eaten.

His dream of making movies at these depths did not materialize this time when the light failed, but all the while he was conscious, he was making sketches. He blacked out a couple of times, when the fan failed.

To make breathing possible during the slow descent, which could take up to six hours, the sphere was equipped with a pump for oxygen and screens of soda lime to absorb

HEALTH Says Adolescents Most Reasonable

The greatest contribution grown-ups can make to the mental, moral and spiritual growth of adolescents is to view the vicissitudes of the period as challenges rather than conflicts, writes Dr. Mary L. Northway in an article "Expanding Horizons" in the current issue of Health, Canada's National Health Magazine published by the Health League of Canada.

The greatest problem the adolescent faces today is the fact that we have come to think and deal with him "A Problem," says Dr. Northway who is Assistant Professor, Psychology, University of Toronto, and a member of the staff of the Institute of Child Study. Her approach to the subject is sympathetic, understanding and intelligent, and it is her view that "adolescents are extremely reasonable."

Statistics that the "tumultuous teens" have become a favorite topic of our times, Dr. Northway comments that had adolescence ever time or inclination to read all the material written about it, it would become overwhelmed with their own importance and unbearable to themselves and their elders.

All situations arising during the adolescent period, says the writer, can be handled by the adolescent; they may also be considered as opportunities for learning to work through situations to a solution, possibilities for growing beyond the boundaries of childhood towards wider horizons of maturity.

Dr. Northway says that from her association with adolescents she noted certain general characteristics: they are very busy, but sometimes lazy, they like to talk, and, on the whole, are reasonable creatures. They are busy, but their activity fluctuates. Interrupted between periods of activity are periods of extreme lethargy. They seem hardly the same people who a day before were so enthusiastic and active.

The writer interprets this lethargy as the adolescent's attempt to "catch up" on himself. His physical and mental growth, and development of interests are so speedy that he seems to need periods of apparent inactivity to re-organize and co-ordinate himself.

One of the greatest difficulties of the adolescent is that he or she knows so little of what is expected of him," Dr. Northway states. "Psychologically it is well established that we tend to act as people expect we will. When we do not know what is expected of us, we are confused and become erratic, yet adults and adolescents are expected to act as adults at one time and as children at another."

The adolescent's role is ill-defined in primitive societies where these things are less and after, formal initiation ceremonies define for the individual the part that he is now considered mature and a fit member of the tribe, and that he is expected henceforth to act as an adult and, furthermore, will be treated as one.

STARTED IDEA
The idea of establishing a tomb for the Unknown Soldier is generally credited to a London newspaper editor, J. B. Wilson.

Smile of the Week--

A man, lurching in a crowded restaurant, hunched in his waiters the subject of a second jump of sugar, and was sternly refused. When he had gone he felt a tug at his sleeve and looked up into the eyes of an old lady who had been sitting at the next table.

"Here you are, young man," she whispered, and pressed into his hand a lump of sugar she had dragged up from the bottom of her handbag. "I always carry some. In case I meet a horse, you know."

The name Richard is French, English, Teuton, and means "stern king."

Make Your Own Furnace

Drawings of a home-made furnace and the floor registers.

THE extra comfort obtained by using a furnace for heating the home is well worth the slight trouble that it takes to construct one. While it is possible to make a home-made furnace out of old drums and then to encase this in a brick covering for a furnace, it is difficult to get at such a furnace in case the firebox of the structure needs repairs later on. For this we would recommend the construction of a furnace jacket of sheet metal carefully designed to make it safe from fire, to operate as a pipeless furnace, which is the best type if the outfit is to be made at home.

The accompanying drawings show such a furnace can be made. While it is possible to use a home-made stove as the firebox for this furnace, in order to increase the economy of heating units and to economize on fuel to the greatest extent possible, a radiating drum can be used. The sheet metal can be made of galvanized iron or out of black sheet iron. The sheet separates the drum almost into two halves. Smoke from the stove goes down the stove and is forced to flow forward then up into the other compartment and out the smoke-pipe which eliminates from the rear end. A small oil drum could be utilized for such a radiating drum, but the installation of a baffle sheet is always advisable to increase the efficiency of the unit. It is a good idea to install a regular furnace check damper on the smoke-pipe, by means of which outside air is admitted into the smoke-pipe when the furnace is on. A turn damper should be installed between the furnace and the check damper as shown in the drawing.

Hot and Cold Registers
This installation is designed to operate on an ordinary type of pipeless furnace, therefore, the warm and its radiating drum are surrounded by two sheet metal jackets. Two sets of registers are employed, the second one consisting of two sheets of 1/2" by 17" registers. These are to be used for the escape of warm air from the furnace. In this register, which on either side of this register is a 30" register, also standard equipment by furnace makers is installed. The latter of these registers is for the purpose of conducting cold air from the floor down into the heating compartment to be warmed.

The cross-section sketches in the accompanying drawings show the heating effect of such an installation. It will be noticed that the stove is placed parallel with the joints in the basement ceiling and centrally under one space between two joists. Two by six inch scantlings are then fitted against the inside surface of these uprights, and under the joists are fitted the headers. Flat galvanized sheet iron is then nailed to the inside surface of the scantlings and to the surface of the joists above to make the warm air jacket around the heater. This jacket extends to within 8 inches of the basement floor on either side of the heater. Only the sides of the installation are double-jacketed, the ends are not treated in this way. It will be noticed that an inner lining is installed inside the one nailed to the studs.

The purpose of this inner lining is to prevent overheating of the studs in the side walls of the installation. The inner lining should be spaced from the outer by means of 1/2" spacers such as short pieces of 1/2" x 1/2" x 1/2" pipe, 3 or 4 inch nails driven through the sheet metal and through these pieces of piping into the studs to provide correct spacing for the insulated lining of metal.

It is now necessary to enclose the hot passages, which run down completely to the floor of the basement. Before putting this lining in place, however, it is a good idea to insulate the inner lining by means of a 1/2-inch layer of non-combustible insulation. This will prevent

GEMS OF THOUGHT

INDEPENDENCE

The word independence is united to the ideas of dignity and virtues; the word dependence, to the ideas of inferiority and corruption.—Jeremy Bentham.

Let all your views in life be directed to a solid, however modest, independence; without it no man can be happy, nor even honest.—Junius.

Right motives give primacy to thought, and strength and freedom to speech and action.—Mary Baker Eddy.

Independent thought is the only true preparation for the proper study of the thoughts of others.—Calderwood.

It is easy in the world to live after the world's opinion; it is easy in the world to disagree with it, but the great man is he who in the midst of the crowd keeps with perfect consciousness the independence of soul.—Emerson.

Contrast in texture, unusual triangular shape—the best of all the most stunning you'll ever own! Easy to remember! Use for chairs or buffet sets. It's smart to match crochets! Pattern 7112, crocheted directions.

Our improved pattern—visual with easy-to-use charts and complete directions—makes needlework easy.

To obtain this pattern send twenty-five cents in cash (change cannot be accepted) to Household Arts Department, Winning Newspaper Union, 60 Front Street, New York, N.Y. Be sure to write plainly your Name, Address and Full Name.

Our Allen Brooks Needlework Book has 109 illustrated designs: crochets, knitting and embroidery. Quilted, plus five new decorative patterns printed in the book. Send twenty-five cents, in cash, for this book today!

Helpful Hints

If your laundry tub has grown rough with wear paint them with ordinary house paint. Let them dry thoroughly for several days before using, and they will last for some time longer.

Salvage the good parts of an otherwise worn-out turkey by cutting them out and using them as washcloths. Crochet a plain stitch along the edge to keep them from fraying.

GOVERNMENT OF THE PROVINCE OF ALBERTA

Announces The First Annual

MASTER FARM FAMILY AWARDS

FOR 1949 TO THE FOLLOWING

JOSEPH G. DUSSEAUT FAMILY WILFRED J. EDGAR FAMILY
VINNY, ALBERTA INNISFAIR, ALBERTA
LALOVEE R. JENSEN FAMILY JACOB F. MELENKA FAMILY
MAGRATH, ALBERTA WARWICK, ALBERTA

JOSEPH L. PAQUETTE FAMILY
DONNELLY, ALBERTA

The Master Farm Family Award is recognized by an award of \$1,000.00, an engraved plaque and a name plate for the farm entrance.

The purpose of the Master Farm Family program is to find and honor those who have achieved notable progress in farming, home-making and citizenship and who, by their example, are encouraging interest in farming as a way of life. The Department of Agriculture is indeed proud and gratified with the high standard of attainment among the farm citizens of Alberta as revealed by the Master Farm Family program.

LITTLE ITEMS OF LOCAL INTEREST

Miss Joan Heath of Calgary recently flew to Boston and New York to visit with relatives. On her return trip she spent a few days in Toronto at the home of Mrs. Alred, the former Miss Joyce Chapman of Carbon.

Chris Diede was a Calgary visitor Tuesday.

Born in Calgary to Mr. and Mrs. Emil Ohlhauser on Monday, November 7, a daughter.

Mr. and Mrs. Frank Sherring spent Monday in Calgary.

Terrance Alan Murphy was christened in High River Anglican Church on Sunday, September 23, Rev. Vaughan-Birch officiated. Sponsors were Mrs. V. Davies and Mr. David Sewell. Those present at the christening tea held in Herrington Sunday afternoon were Mrs. Heath, Mrs. Murphy, Mr. and Mrs. Davies, Florence Jensen, Dorothy Davies, Mr. and Mrs. Leslie, Mr. and Mrs. Jack Walker and David Sewell. Afternoon visitors from Calgary were Mr. and Mrs. Gerlitz and Mr. and Mrs. McEwan. Terrance Alan is the son of the former Miss Peggy Heath of Carbon.

Aaron Klassen and Chuck Newton of Calgary were Carbon visitors Saturday for the annual taking of stock at the Builders' Hardware.

Mrs. Fiona Code and Miss Betty Code are visiting at Clearwater, Man., where Mrs. Code's father is seriously ill.

Born in the Drumheller hospital to Mr. and Mrs. Pat Poole on Wednesday, November 2, a girl.

Mr. George White and Mrs. K.E. Nash of Calgary were Carbon visitors over the weekend.

A number of local residents attended the funeral of Mrs. A. Shaw in Calgary on Saturday.

Emil Ohlhauser, Bobby Ohlhauser and Howard Hunt spent the weekend in Calgary and attended the Barbara Ann Scott show, "Skating Sensations of 1949".

Born in the Drumheller hospital to Mr. and Mrs. Herman Hyde, a son.

Mr. and Mrs. Will Skerry spent the weekend in Acme at the home of Mr. and Mrs. Frank Emery. They were accompanied on their return by Mr. Tom White, who has been visiting for the past few days at the Emery home.

ZION BAPTIST CHURCH

Rev. Jacob G. Rott, Pastor Sunday School every Sunday morning at 10:00. Mr. R. Bertsch, superintendent and Mr. A. Forsch, assistant superintendent. Classes in English, with the adult Bible class in German. A hearty welcome is waiting for you at our Sunday School.

Morning worship at 11 a.m. "The Holy Spirit is ready to send us a big Revival."

Evangelistic meetings Monday evening at 7:30. These meetings will continue through to November 25th.

NOTICE

IN THE MATTER OF THE GAS RESOURCES PRESERVATION ACT, being chapter 2, Statutes of Alberta 1948 (Second Session) and IN THE MATTER OF THE APPLICATION OF THE NORTHWEST NATURAL GAS COMPANY AND ALBERTA NATURAL GAS GRID LIMITED.

TAKE NOTICE that an application will be made on behalf of Northwest Natural Gas Company and Alberta Natural Gas Grid Limited under the Provisions of The Gas Resources Preservation Act, chapter 2, 1948 (Second Session), to the Petroleum and Natural Gas Conservation Board for a permit to remove gas or cause it to be removed from the Province of Alberta for use or consumption elsewhere than within the Province.

AND FURTHER TAKE NOTICE that the application will be heard at the hour of ten o'clock in the forenoon on the 26th day of November, A.D. 1949, at the Court House in the City of Calgary, in the Province of Alberta.

DATED at the City of Calgary, this 25th day of October, A.D. 1949.

NORTHWEST NATURAL GAS COMPANY.

FLYING MAIL VAN

The first night delivery of mail by helicopter in Britain began recently on the initial flight when bags of mail were flown directly from the Midlands to the North covering a distance of 100 miles in 45 minutes. This compares with the usual three hour train journey and allows much later clearance of postboxes for delivery next morning. The flying night mail van will in future supplement the daytime services.

A horsepower is the force required to raise 33,000 pounds one foot in one minute.

Radio waves travel at the same rate as light waves, 186,000 miles a second.

...well
practically unanimous

You can still find people who "don't believe in banks" ... who keep their cash in old coffee pots, or hide it in the woodpile, or carry it around.

But most folk nowadays keep their money in bank accounts. They can get it whenever they want it; and they can pay their bills by cheque. Canadians have more than seven million such deposit accounts. In terms of Canada's adult population, that makes it practically unanimous.

The banks, in turn, know they must earn this confidence by giving you the best service they know how.

Today you can take your account to any bank you choose. And what is in your bank book is strictly between you and your bank. It is your own private business.

"...most folk nowadays keep their money in bank accounts."
